Models: Travel'r, Eclipse, Marquee, Freedom

As a product improvement, Carefree is upgrading the single switch for 12V awnings. The new switch provides enhanced performance with an updated contemporary appearance.

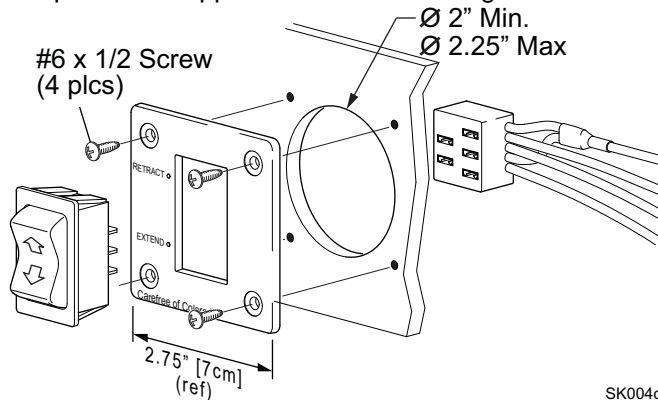

The new switch uses a different mounting hole and the switch wiring uses a connector block on the back of the switch.

SWITCH COMPARISON

<p>OLD STYLE SWITCH</p> 	<p>NEW SWITCH</p> 
<p><u>Mounting Hole:</u> Round - 2"-2.25" Diameter</p>	<p>Rectangular - 1.25" x 1.88"</p>
<p><u>Required Depth Clearance (from mounting surface):</u> 2.75"</p>	<p>1.25"</p>
<p><u>Wiring Connection:</u> Wires connect directly to the switch</p>	<p>Wires connect to pre-wired connector block. The connector block connects to the back of the switch</p>

ADAPTOR SWITCH PLATE

For replacement applications or if a rectangular hole is not possible, a rectangular switch plate is available,

The square plate is included in the replacement switch kit or can be specified at time of new orders.

The plate allows the switch to be mounted in a previous location that used a round mounting hole.

Please note that the new square plate is not interchangeable with the old square plate. The hole size for the switch is different.

The switch kit is available and in production effective immediately, the square plate will be available April 1, 2010.

For specific wiring details refer to the product installation manual available on-line at www.carefreeofcolorado.com
